DIGITAL LITERCAY PROJECT REPORT

Name: Anushka Upadhyay

Registration Number: 25BAI11112

Branch: B.Tech CSE (AI & ML)

Year: First Year

Course Code: CSE0001

Date: 30/03/26

Introduction

Digital literacy is an essential skill in today's technology-driven world. It enables individuals to effectively use digital tools, communicate responsibly, and stay safe online. This project was designed to build a strong foundation in digital literacy by exploring various platforms, tools, and practices.

As a Student Digital Ambassador, the objective of this project was to create a digital portfolio that demonstrates awareness of online presence, collaboration tools, email etiquette, and cyber safety. Each task in this project focused on a specific aspect of digital literacy, helping to develop both practical and theoretical understanding. Through this project, I gained valuable insights into using digital platforms efficiently and responsibly.

Task 1: Infographic

For Task 1, I created a digital literacy awareness infographic using Canva. The infographic covers key aspects such as the meaning of digital literacy, useful digital tools for students, safe internet practices, and email etiquette. I selected a clean and simple layout to

ensure that the information is easy to understand and visually appealing.

The infographic highlights how digital literacy helps students use technology effectively in both academic and professional environments. It also emphasizes the importance of safe browsing habits and proper communication through emails. While designing the infographic, I explored different templates, color combinations, and icons to make the content engaging.

One challenge I faced was selecting the most relevant information and presenting it in a concise manner without overcrowding the design. Overall, this task helped me improve my creativity and understand how to present information visually.

Task 2: Digital Portfolio

In Task 2, I created my digital portfolio by setting up profiles on GitHub, LinkedIn, and Kaggle. GitHub is a platform used for hosting and managing code repositories, making it essential for developers to showcase their projects. LinkedIn is a professional networking platform that helps individuals connect with peers, mentors, and recruiters. Kaggle is widely used for

data science and machine learning, allowing users to practice and participate in competitions.

Creating these profiles helped me understand the importance of maintaining a professional online presence. I plan to regularly upload my projects on GitHub, build connections on LinkedIn, and enhance my skills through Kaggle over the next four years.

This task was useful in preparing me for future internships and job opportunities, as these platforms play a significant role in showcasing skills and achievements.

Task 3: Platforms

For Task 3, I explored both a coding platform and a collaboration tool. I used HackerRank to practice coding and completed a beginner-level problem. This helped me understand how coding platforms work and how problems are structured. It also gave me confidence to start practicing programming regularly.

In addition, I created a Google Form titled "Digital Literacy Awareness Quiz" with five questions. The form included both multiple-choice and short-answer questions. I also viewed the responses in a linked Google

Sheet, which helped me understand how data can be collected and analyzed efficiently.

This task showed me how digital tools can be used for both learning and collaboration. These platforms will be very helpful in my academic journey, especially for improving problem-solving skills and working on group activities.

Task 4: Email Etiquette

Effective communication is an important part of digital literacy. Poorly written emails can lead to misunderstandings and create a negative impression. For example, if a student sends an email without a proper subject line or uses informal language, the recipient may ignore it or misunderstand the message.

In this task, I learned how to write professional emails using clear subject lines, proper greetings, and a polite tone. I also created a checklist for responsible social media usage. This task helped me understand the importance of maintaining professionalism in digital communication, which is essential in academic and professional environments.

Task 5: Cybercrime

While researching cybercrime, I was surprised to learn how easily phishing attacks can trick people into sharing sensitive information. Many fraudulent messages and emails appear very genuine, making them difficult to identify.

This task increased my awareness of online threats and the importance of staying cautious while using digital platforms. I learned to verify links, avoid sharing personal information, and be careful while handling financial transactions.

One habit I will change is being more careful before clicking on unknown links or responding to suspicious messages. This knowledge will help me stay safe online and guide others as well.

Conclusion

This project provided a comprehensive understanding of digital literacy and its importance in today's world. It helped me develop skills such as creating a professional online presence, using digital tools for collaboration, and practicing safe online behavior.

Through the various tasks, I gained both practical experience and theoretical knowledge. This project has made me more confident in using digital platforms effectively and responsibly. Overall, it was a valuable learning experience that will benefit me in my academic journey and future career.
